

Together, let's offer
the very best in technology

High level of performance

Since 1986, we have chosen to lead the way in terms of performance in order to offer a global service for the management of traffic lights and the road traffic signal control.

We have decided to follow this path to performance with you, with all due respect and consideration for the demands of our profession, the environment, and human beings.

Because it is our duty to ensure that our skills meet your expectations, we constantly place our skills and knowledge and the very best technology at the service of traffic system.

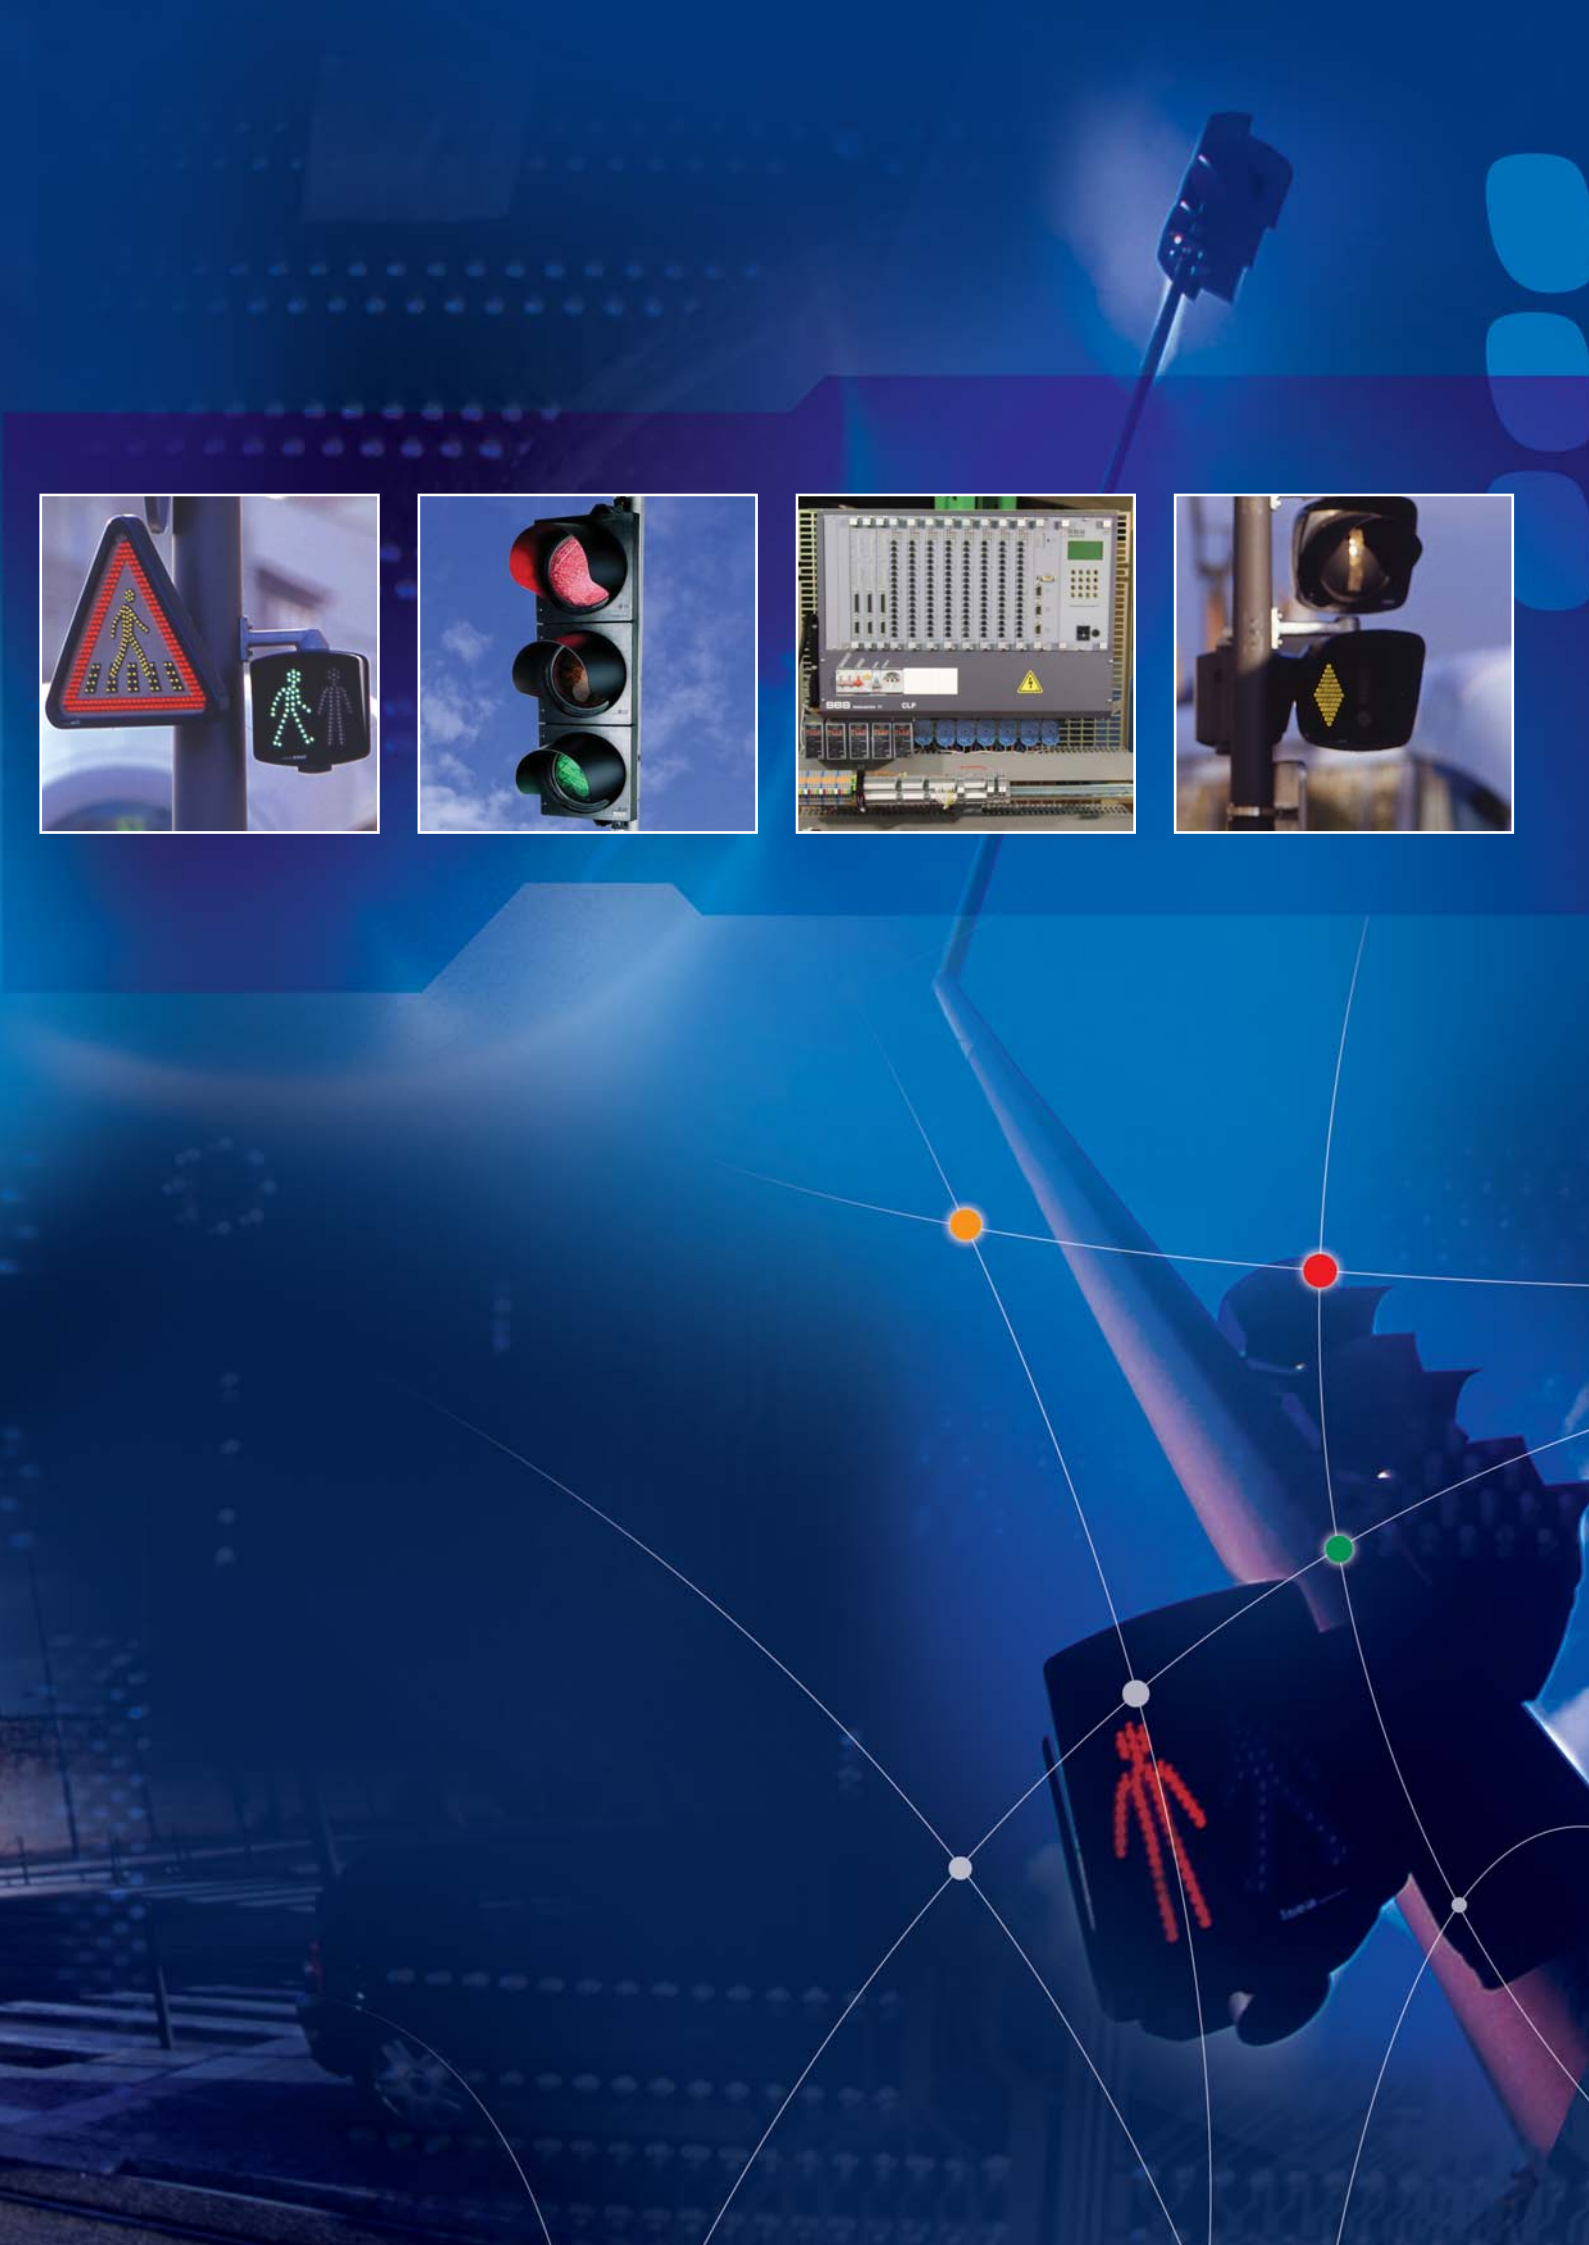

Innovation, design, training, maintenance... the various spheres of involvement interconnect to provide you with personalised solutions for all your projects. More than a service, and more than an accompaniment, SEA Signalisation commits itself with you with the same state of mind and the same ethical conception of our profession.

Who is better placed than you to understand the stakes in a profession at the service of the road user ?

We invite you to discover our professional role and spheres of involvement over the following pages...

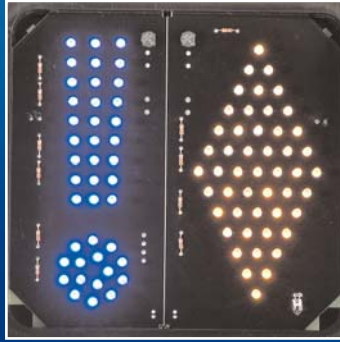

We wish you a safe journey on the road to the signs of performance !

Francine & Daniel VERNIAUT

Design and development

Our research department has mastered all the stages in the manufacturing process, in close collaboration with our highly experienced partners :

- design and development
- construction of the moulds and equipment
- industrialisation and production

Our products meet the most draconian quality requirements and are designed in scrupulous accordance with all applicable standards and regulations.

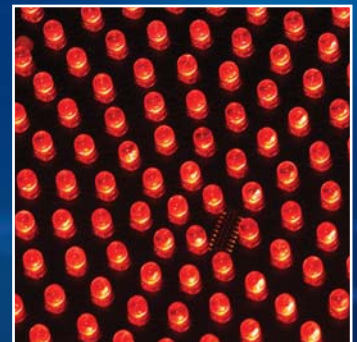

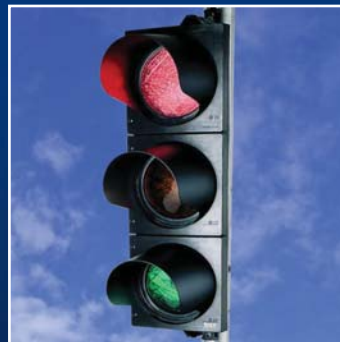

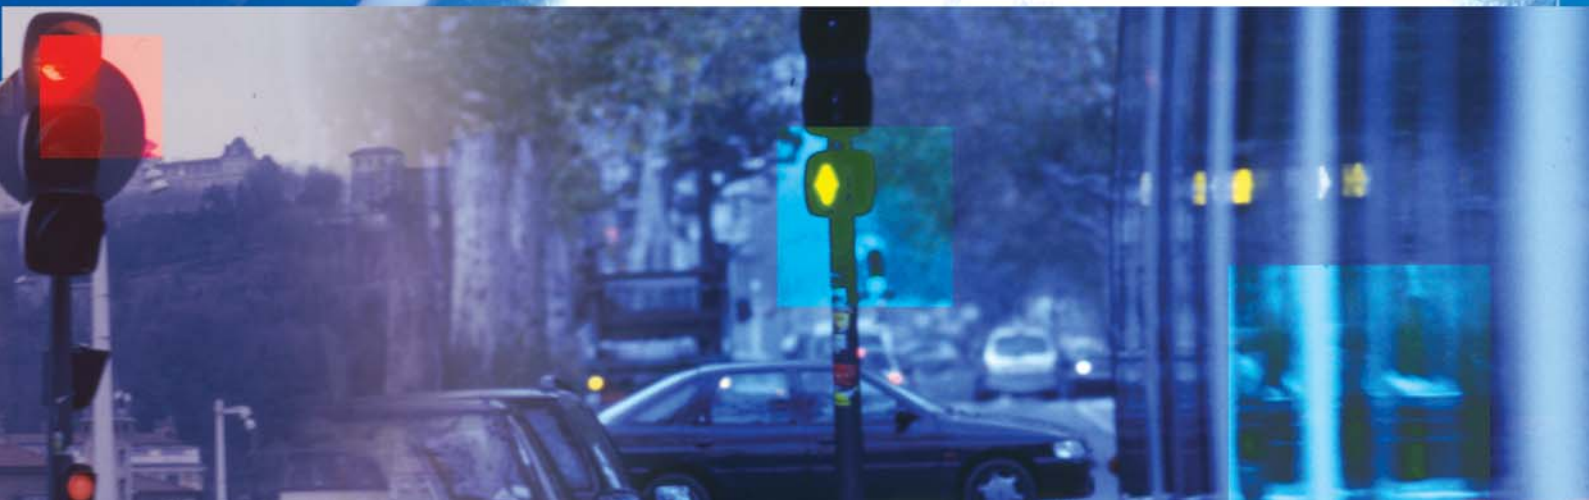

Traffic signals

A manufacturer of road signalling equipment (traffic lights), SEA Signalisation offers a wide range of models which shapes and colours have been designed to integrate harmoniously in the chosen site. The optical equipment (light source) can be varied in accordance with the technical and financial requirements and constraints of your project.

Each one of these products, designed with attention to the motto “always better”, perfectly expresses the key words of the company SEA Signalisation: innovation, solidity, design, perfect finish and ease of maintenance.

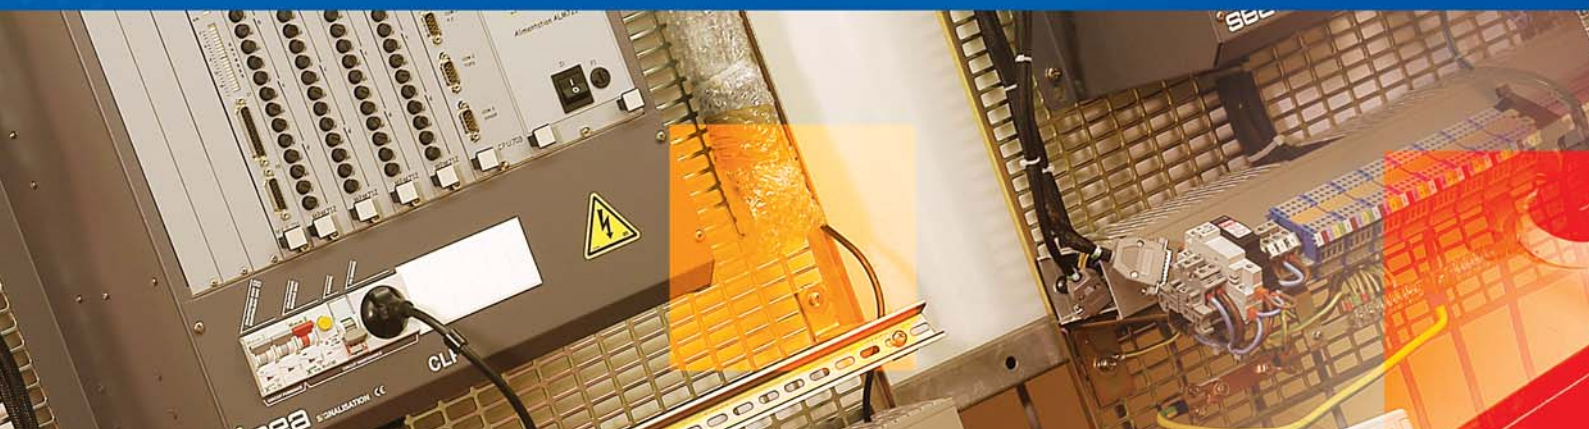

Road traffic signal control

Our SETRA certified traffic controllers offer recognised technical and functional performance and are renowned for their reliability and longevity.

In accordance with our philosophy of “always better”, our quality control department rigorously selects all the components and materials used. Manufacturing tests and checks are frequent and varied.

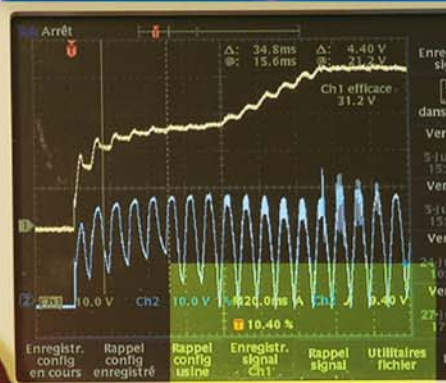

Our user-friendly and intuitive TOPS software (Optimised Treatment of the Parameters of Signalisation), developed by SEA Signalisation, enables you to optimise the traffic flow at junctions equipped with traffic systems, whether simple or complex.

Optimised Treatment of the Parameters of Signalisation

Project management

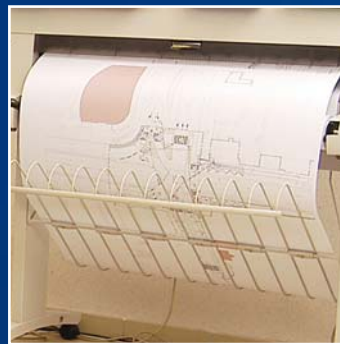

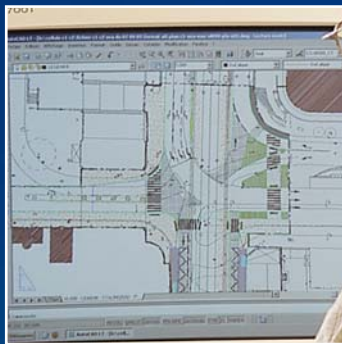

Within the framework of a global project, and with the assistance of our selected partners, we can provide you with a complete service at every stage of your project : the production of studies and plans, installation work, civil engineering...

Training

With a wealth of proven experience in traffic regulation, our training team has amassed significant expertise in the field over the years, as well as great facility in teaching. They are more than capable of providing you with the training necessary to improve your knowledge and skills for optimal use of your equipment.

Maintenance

As the manufacturers of the products we sell, we are naturally well placed to provide you with a top quality service in terms of preventive and/or curative maintenance of your traffic control network.

Maintenance

Logistics Storage

Our production site is located at Vaulx-en-Velin, on the outskirts of Lyon, at the heart of a dense and active industrial network.

Our recently built premises, spacious and well equipped, offer our staff a high-quality working environment.

Our large warehouse and production workshop capacity enables us to keep a major stock of finished and semi-finished products, guaranteeing a fast response in terms of the processing of orders.

Concerned to protect the planet, the management at SEA Signalisation is always ready to get involved and invests solely in technology that respects our environment.
